Date: 14 September 2026

The Chief of the Air Staff
Headquarters Nigerian Air Force
Abuja, Nigeria

SUBJECT: SUBMISSION OF FINAL TECHNICAL AND COMMERCIAL PROPOSALS - A-29 SUPER TUCANO AIRCREW TRAINING PROGRAM

Dear Sir,

Further to our letter of 28 July 2026 (Ref: SDSS/A29/CL/001), and to the subsequent discussions held with the Nigerian Air Force, Strategic Defense submits its Final Technical Proposal and Final Commercial Proposal for the A-29 Super Tucano Aircrew Training Program.

Those discussions confirmed that the requirement is most effectively met by augmenting the Nigerian Air Force's own instructional capacity rather than by establishing a separately managed training organisation. We propose to recruit, deploy, administer and support a resident cadre of qualified A-29 instructors at 407 Air Combat Training Group, NAF Base Kainji, for a period of twelve months, delivering academic, ground-school, simulator and airborne instruction against the approved Initial Qualification Training and Mission Qualification Training syllabi.

The proposals rest on a single principle: the Nigerian Air Force retains command, tasking authority, training standards, and qualification and certification authority throughout. The instructors are integrated directly into the Nigerian Air Force training chain. We propose no parallel chain of command and no separate standardization or safety management function at the deployment base.

The engagement is priced as a lump sum per instructor per year. The rate is the same for each instructor and does not change with the size of the cadre, so the Nigerian Air Force may establish the cadre at a single instructor and increase it later without renegotiation. Where a position falls vacant, Strategic Defense will deploy a replacement and extend the engagement of that position by a period equivalent to the vacancy at no additional price, so that the Nigerian Air Force receives twelve months of instructor service in respect of each position.

We would draw particular attention to Section 19 of the Final Technical Proposal, which allocates aircraft hull risk and third-party liability arising from the operation of Nigerian Air Force aircraft to the Nigerian Air Force. Confirmation of that allocation is a condition precedent to the deployment of any instructor, and we would welcome early discussion of it.

Strategic Defense is ready to present the proposals to the Nigerian Air Force at a time convenient to your office, and to begin recruitment and mobilization on confirmation of the instructor complement and the commencement date.

Yours faithfully,

Wael ALTAKI
Chief Executive Officer
StrategicDefense Security Systems Ltd.
